

MecWise @ WebPortal

-- From a behind-the-counter mentality to knowledge sharing.

-- Barriers between providers and consumers of information, goods or services are to be avoided

-- Information is something we expect to find in cyberspace - and freely available, so that we can help ourselves.

:: Benefits Of Using MecWise@WebPortal ::

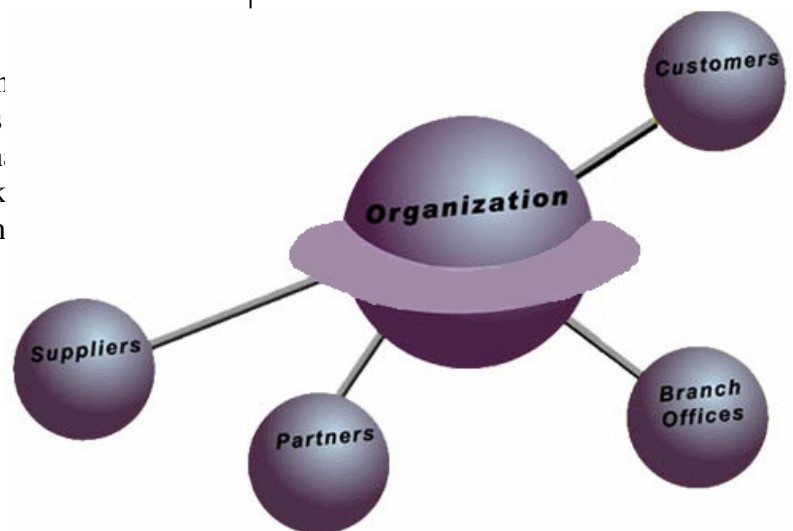

- Win when competing for customers. Customers are increasingly more powerful and the battle for them is about offering them identity and a sense of belonging - and yes, even participation. Turn customers loose on the internet - it's the best and most cost-efficient customer service you can imagine!
- Gather all office functions, integrate applications and place them on the Net. Services and information will be available for everyone on the team, no matter where in the world they are. This gives you a powerful management tool and an overview of projects, documents and resources.
- Set up a resource centre that both your customers and your customers' customers can use interactively. Here, your customers will be able to place their applications or publish information for their customers.
- Tailor an interactive web portal, for shared use in dynamic interaction between different players. MecWise@WebPortal provides the framework - you decide on the content and form.
- Let everyone deliver content to the intranet website. MecWise@WebPortal provides system with open and locked areas (ch everyone may publish directly from their k together on projects between departm companies or across national borders.

MecWise@WebPortal [Sharing knowledge in a world without borders]

:: Features ::

Flexible user management and security

MecWise@WebPortal allows creation of multiple, secure members' areas to your website. It provides feature for online registration of new users. Users are assigned to any members' area (channels). Multi level security (roles) can be assign in each channel. Channel roles include author, editor, resource manager, publisher and administrator. Security is thus maintained and building the structure is simple.

Simple access control

A user-friendly menu system lets you control who can read, create and delete different resources. External users can be excluded from parts of the network and a small group may be granted editorial responsibility for a Net publication or discussion group. Control is possible all the way down to the page level.

Simple navigation and user interfaces

The only thing a user needs to get started with MecWise@WebOffice is the Internet address, a username, a password - and a mouse! To publish information, fill in a form and type in the information in the user-friendly editor. Alternatively, user can also copy the contents from other documents and paste them onto the editor. The documents are converted to HTML format, avoiding the nightmares that many companies have experienced when transforming existing information for the web.

Accommodates any visual appearance

MecWise@WebPortal is supplied with a series of tools for the administrator, among which are channel maintenance, user account maintenance and template definition.

Multi-language sites

MecWise@WebPortal allows creation of multi-language sites, thus allowing visitors to view site text and captions in their own language.

Personalization for unique identity

Each company can personalize the look and feel of their web portal by changing the thematic skins.
